

List of speech and language apps:

Articulation Station from Little Bee Speech is one of the most comprehensive articulation apps designed for children to learn how to pronounce and practice different sounds. The program allows users to practice at the word, sentence, and story level in 22 sounds that target the initial, medial, and final positions of words. Most of the sounds have 60 target words.

Users can choose from these six different practice activities:

- *Flashcards*: Practice sounds with over 1,200+ pictures.
- *Matching Game*: Match like items while practicing the sounds.
- *Rotating Sentences*: Practice target sounds with rotating words in a fixed sentence.
- *Unique Sentences*: Practice each target word and sounds in a new sentence.
- *Level 1 Stories*: Short and silly rhymes that come with picture prompts and comprehension questions.
- *Level 2 Stories*: Short and creative stories with comprehension questions.

As a bonus, you can tailor the experience to your child's needs by creating your own flashcards with custom images. Articulation Station is free, and it's available on your iPad, iPhone, and iPod touch. For a more comprehensive program, you can upgrade to Articulation Station Pro.

The Spingo app from the Speech and Language Store offers children a way to learn listening and language skills by playing a fun, interactive game with aliens and spaceships. The app was designed by speech and language therapists to focus on nouns, verbs, prepositions, and adjectives. It comes with a range of age possibilities, including early language development to a much more complex level of combining several aspects of language at once. In order to customize the app to each level, Spingo breaks the content down further into four groups.

- *Level 1*: Uses one main word. Appropriate for 18 months and older.

Talk About Town – Speech and Language Therapy Services

- *Level 2:* Uses two main words. For kids with a developmental level of two to three-years-old.
- *Level 3:* Uses three main words. For kids with a developmental level of three to four-years-old.
- *Level 4:* Uses four main words. For kids with a developmental level of four-years-old and older.

- **100 Words for Babies & Toddlers**
- Perfect for introducing your child to new words. This is a speech and vocabulary learning game for pre-school aged children between 6 months and 4 years old. Colourful animations keep little ones entertained.

ArtikPix uses flashcards and matching games to help kids practice saying words and phrases. For parents and SLPs, the app can record video of kids articulating, and it saves exportable, time-stamped performance data for individual sessions or groups of up to four kids. You get “th,” “w,” “y,” and “h” sounds for free. Buy the rest individually or everything all at once for around £20.

CineVox is a fairly new app that responds to sounds with fun graphics, encouraging kids to practice their articulation. And, unlike other apps, it’s actually free. Sounds like hisses and shhhs produce additional graphical effects, such as a snowstorm, switching to black-and-white, and a hall-of-mirrors look. The best part, besides the free, is that if you connect your iPad or iPhone to AppleTV, the graphics play on the big screen.

ABC Alphabet Phonics

ABC Alphabet Phonics is a simple, colourful app. It is good for helping children who are struggling with letter name identification practice. Pictures and sounds can be personalised too!

Baby Sign & Learn

Help your baby communicate by teaching him/her baby sign language. The Baby Sign and Learn animated characters make learning to sign with your baby or toddler lots of fun.

iTouch iLearn Words Speech & Language Skills

There's lots of educational content within this app. Children can complete different lessons and games in order to learn different words and songs. The app is easy enough for little ones to use.

Speech With Milo: Sequencing

We really like this app, it's so effective. Learning to recognise sequences is one thing, but figuring out how to arrange them into stories is another. Combines familiar sequencing exercises with fun animations to help your little ones get their imagination in order.

Talk About Town – Speech and Language Therapy Services

Speech with Milo: Prepositions was created as a fun and entertaining speech therapy tool for children. Milo is ideal for parents wanting to teach their children key language skills. It can be used for toddlers and pre-schoolers, as well as children with language delays.

Super Duper Apps

Super Duper have designed a number of free apps for educating and helping children across all aspects of speech, language and communication development. Have a look, there's lot's to choose from!
